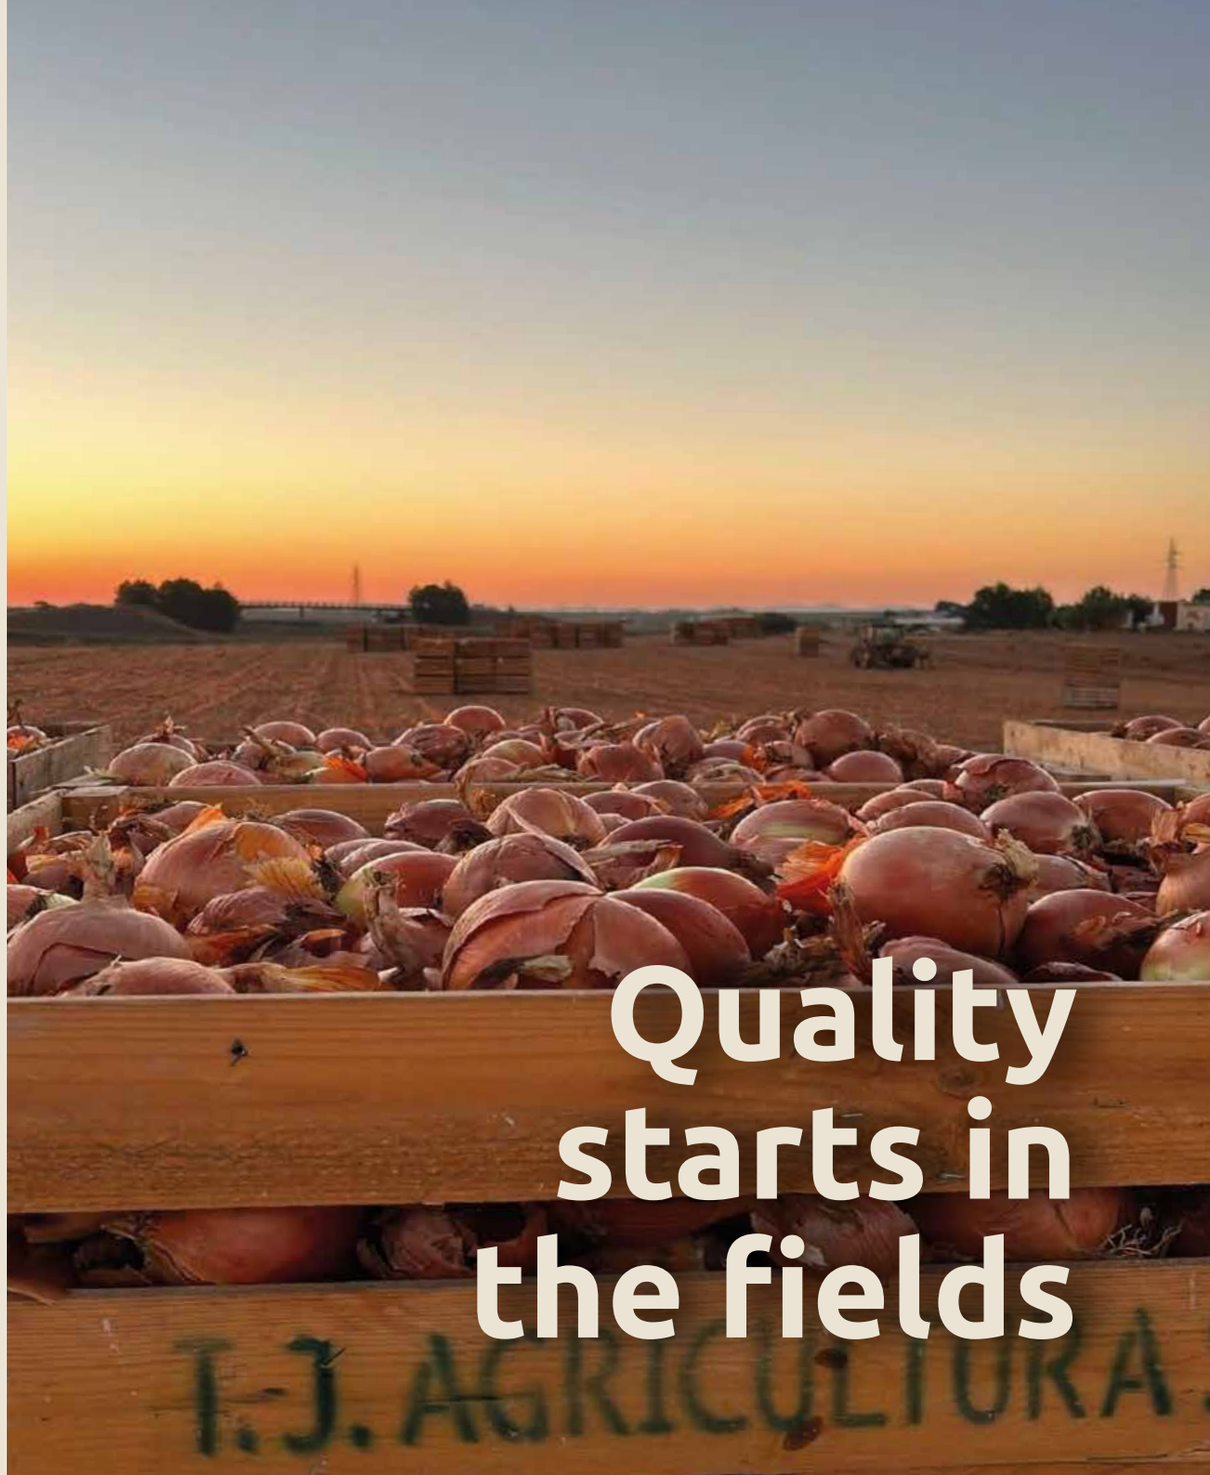
TJ Agricultura



Quality starts in the fields

TJ Agricultura is a family business that produces, transforms and markets agricultural products with over 30 years of experience in the sector.

At the heart of our operations are the more than **4,000 hectares of prime farmland** we own, allowing us to control the entire process **from field to table.**

30 Years
OF EXPERIENCE

30.000 Tm
OF ANUAL PRODUCTION

20.000 m²
OF WAREHOUSES

TJ Agricultura

TJ Agricultura currently produces around 30 million kilos of onions annually on 350 hectares of land, a figure that makes us one of the **leading producers in Europe** and a main supplier for distribution chains worldwide.

We grow several varieties of onion to ensure that the product is available throughout the year. In addition, we package in nets, bags or boxes, according to the needs of our customers around the world.

Our business is built on quality, which is why every step is meticulously monitored.

We produce 100% of the onions we sell, allowing us to oversee the entire growing cycle and select the best end product.

The process begins in the fields with careful seed selection, control of cultivation techniques, choice of fertilisers, and coordination of crop rotation in order to guarantee product traceability and food safety.

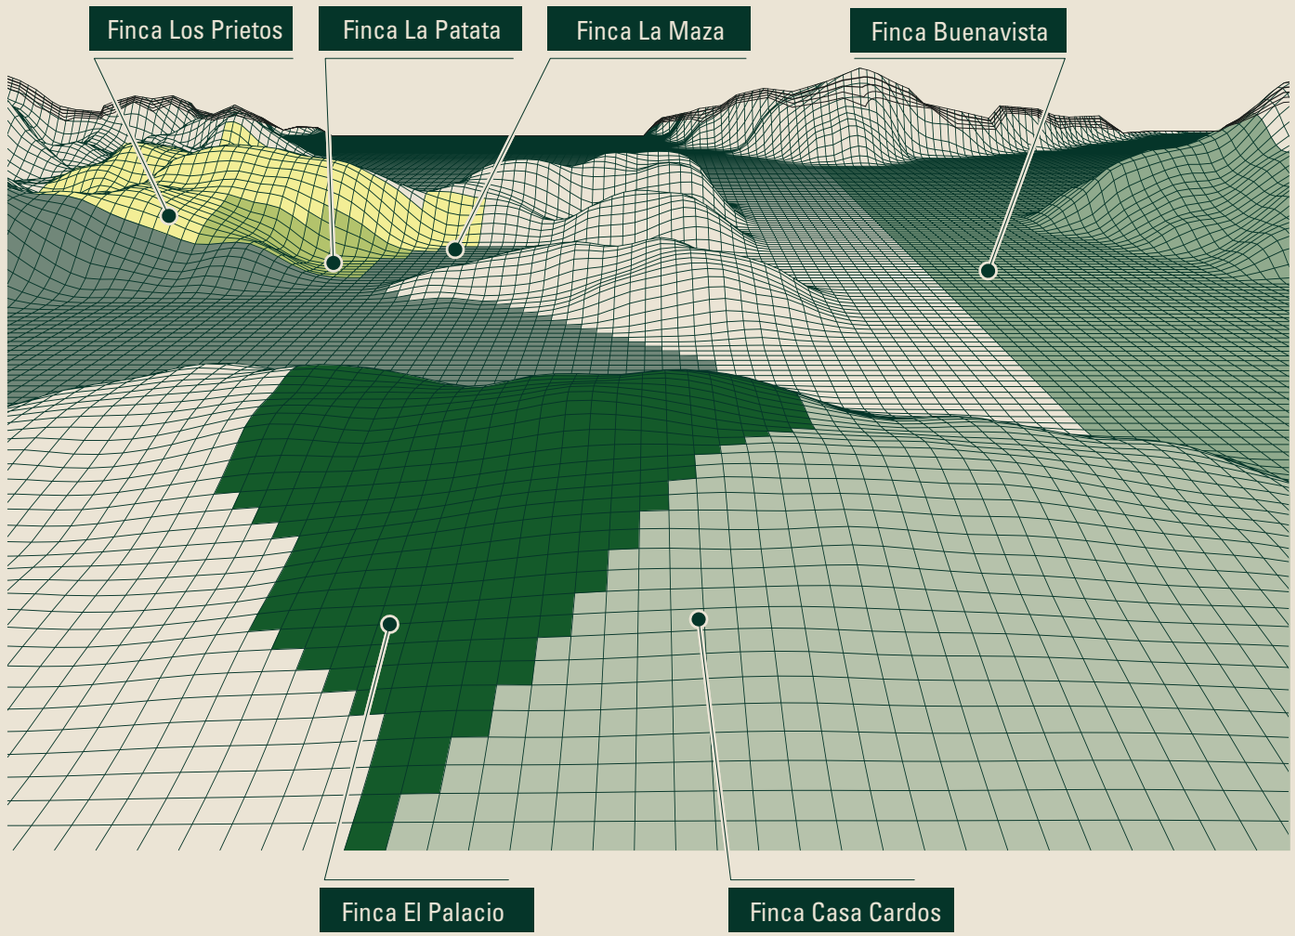
OUR FARMS

Our crops are cultivated on over 4.000 hectares of our own land, which is located less than 20 km from our facilities, in the heart of La Mancha, between Cuenca and Albacete.



This production area has been awarded the Spanish Protected Geographical Indication (IGP) “Cebolla de La Mancha” (“Onion of La Mancha”)

TJ Agricultura

The unique combination of altitude, climate, and soil type in this area produces an onion with very specific characteristics, that distinguish it from others: a total dry mass of between 5% and 10%, a unit weight ranging from 165 to 1000 grams, a size between 50 and 120 mm, and a minimum sugar content of 35° Brix (±0.5%).

Furthermore, at **TJ Agricultura,** we practise crop rotation, leaving a gap of 5 years between onion crops grown on any given plot. The result is a higher quality product.

QUALITY

Our quality managers supervise the entire cultivation cycle, conduct laboratory analyses, control processes in the warehouses (storage, labelling, and packaging), monitor logistics, and evaluate the results. In addition, we adhere to the highest industry standards: **Global G.A.P, GRASP, IFS Food, IGP 'Cebolla de la Mancha', Sedex SMETA, Tesco NURTURE and LEAF.**

TJ Agricultura

CONSERVATION, PROCESSING AND PACKAGING

At TJ Agricultura, we have successfully led the process of modernising crop production without losing sight of the legacy passed down to us through the generations: a deep respect and love for the countryside. Once our onions have been harvested and labelled, they are taken to our facilities, which encompass over 20000 m² of warehouses equipped with cutting-edge machinery to guarantee product freshness and availability throughout the year.

TJ Agricultura

Step 1

The onions are collected in pallets and labelled with their harvest date and lot number. They are then taken to our warehouses for processing and preservation.

Step 2

Our team performs the initial sorting and segregation by size. During this phase, the product is inspected and any unsuitable items are removed.

Step 3

Next, the product is packaged. Here, a further quality control check is performed, and the weight, packaging, and labelling are verified.

CUSTOMERS

We export onions worldwide and rank among the top suppliers for distribution chains and markets globally.

LOGISTICS

We are strategically located less than two hours from both Madrid and the Port of Valencia. We also have our own fleet of trucks and collaborate with major national and international transport companies to ensure the best handling and delivery of our products, regardless of volume or destination.
